

## PRECINCT VOTING OFFICIALS URGED TO SPEED COUNT

Attention of Election Boards  
Called to Laws by Secre-  
tary of State.

Attention of election officials is being called to the duties required of commissioners and clerks at the various precincts by the office of the secretary of state, with a view to expediting the November election results. The state's election laws contain explicit direction as to the duties to be performed by these officials and as to the promptness with which they are to be performed, but at the primary there were numerous complaints that these directions were disregarded.

One of the unique features of the West Virginia election law is the provision that the result of the count in each precinct must be posted at the front door of the polling place. The section of the code applying to this reads: "On completing the count and recording the same on tally sheets, the commissioners of election shall immediately make a memorandum of the total vote cast for each candidate, deliver a copy thereof to each member of board, and post a copy thereof on the front door of the polling room, and transmit a copy thereof to the clerk of the county court, who shall post the same in his office for public inspection."

The last portion of this has been quite generally observed, and at the most recent election, the primary, but few precincts failed to provide the County Courts with the memorandum. However, there were complaints from many precincts that copies were not posted in front of the polling places, and newspapermen seeking to collect returns from the precincts until after the closing of the polls, and the County Court of the night of the primary found numerous members of the boards who had no record of the vote.

Another section of the code providing that there shall be no delay in counting the ballots, reads: "When the polls are closed, the commissioners of election and poll clerks shall proceed to ascertain the result of the election in the manner hereinafter specified, and shall not adjourn nor delay until the votes are all counted, the result ascertained, the memorandum made, and copies thereof delivered and posted as hereinafter required."

## DISCRIMINATION BY RAILROADS CHARGED

BOSTON, Mass., Oct. 23.—J. G. Bradley of Dundon, W. Va., president of the West Virginia Coal Association, in a statement issued here today, charged that the railroads of the country are continuing to discriminate against the coal industry in face of the desperate need of cars in the bituminous coal fields and to the great damage of industries and domestic consumers needing coal. In support of this assertion is the fact that for the month of September the per cent of cars of coal to the total cars loaded was only seventeen and one-half as against a normal of thirty-four per cent, which would indicate that less important but better paying commodities are being moved at the expense of coal at this time. Such a situation would seem to be against the country's best interest.

## DAYLIGHT SAVING TO BE VOTED ON IN NOVEMBER

READING, Pa., Oct. 23.—The question of daylight saving will come before the voters of the city and county at the November election. The vote will be taken under the auspices of the county commissioner, but the cost will be borne by private subscription. Since daylight saving has been put into effect by the city, there has been opposition from the rural communities. Now that the matter will come up before the voters, an ordinance has been introduced in city councils to repeal the present daylight saving bill. The county commissioners announce that notwithstanding this they will go ahead and take the vote, and have the matter settled for all time.

## Muscle Shoals Ready in Three Years, Says U. S. Engineer Now Busy on the Job

BY HARRY HUNT

WASHINGTON, Oct. 23.—Muscle Shoals, the \$100,000,000 power and nitra plant being developed by the government on the Tennessee river at Sheffield, Ala., will be completed within three years.

Brigadier General Taylor, assistant chief of the U. S. engineers in charge of the work—greatest of its kind ever undertaken—says so.

"Give us thirty months," he adds—"three years at the outside—with appropriations to keep going at full speed ahead, and we'll have the job completed by the fall of 1925 at the latest."

"Under favorable rainfall conditions, we may make it by the spring of that year."

October 1, the date on which the new appropriation of \$7,500,000 for continuing work on the dam became available, found everything in readiness for active construction work during the coming winter.

Right on the Job  
As soon as the new appropriation was assured, army engineers, headed by Col. W. J. Barden, recruited labor forces and resumed such construction as could be attempted. This was done by utilizing money that had been held in a maintenance fund for caring for the unfinished structure and the valuable equipment on the works.

"Since July 15, we have put in the cofferdams across the unfinished part of the north channel," General Taylor says, "have excavated for the dam foundations, thrown down to bed rock and are ready to start pouring concrete."

With our present organization we expect to put in about 2000 cubic yards a day. Unless unusually high waters interfere, we expect to bring this north section up to its first stage before spring.

"Had we been required to wait until the new appropriation was available before undertaking this excavating and the building of the cofferdam, it is doubtful if next spring would have found us much farther along than we are now."

By utilizing the money being held for maintenance in this work, we have got a running start that will enable us to make good progress through the winter."

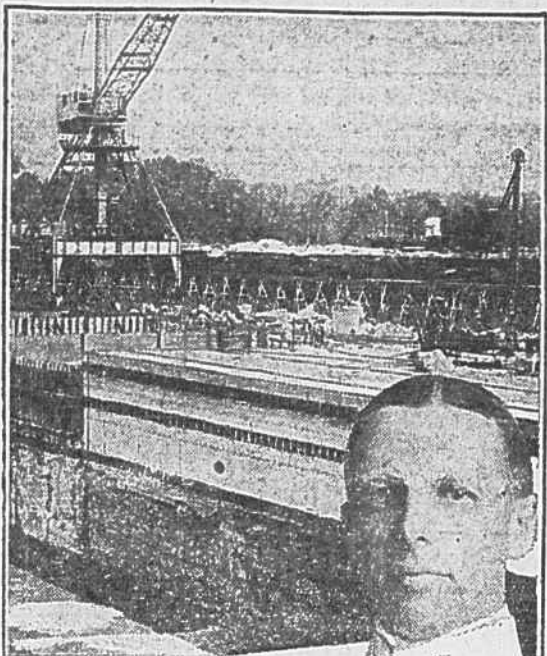

Fifteen hundred men are busy working on the Wilson Dam. When completed this will be the largest piece of concrete in the world, containing one and a quarter million cubic yards. It will be nearly a mile long, 90 feet high and 100 feet thick at its base. There will be a wagon and automobile road across its top.

In addition to excavation and cofferdam work on the north section of the dam, which lies between an island in mid-stream and the north shore, work has been pushed in getting in foundations for the power house section near the south shore.

"The power house is the controlling factor," explains Taylor. "Its construction will be carried along so it will be complete and ready for operation by the time the last section of the big dam is in place."

"But we'll have to have more money. The \$7,500,000 is just for this fiscal year."

some ancient structure of the old world, but a nearer approach discloses the illusion and it appears as if—rough and unseemingly—it can be ascended at the north side by climbing up holes which have been cut in its face, for that purpose; the second or main bench can be ascended, with greater care at an opening on the south side where the water has washed out a crevice large enough to admit one's body, and by pushing against the side of the crevice one can push himself upward some fifteen or twenty feet, which places the adventurer on the second bench. Passing around the eastern point of the rock the ascent may be continued up the north face. A large stream of clear water runs for about twenty five rods on the north east side of the rock. Deep ravines have been cut out by the water between the two and the rock. The bluffs around are composed of the same material as the rock and tower, which is lime in its unslacked state. Both of the singular natural objects are covered with the names of travelers and the dates of their arrival, some being engraved with knives and others written with red and black ink. There is a beautiful valley stretched out between

BUILDING THE POWER HOUSE SECTION OF THE WILSON DAM AT MUSCLE SHOALS. INSET: COL. W. J. BARDEN.

farther along than we are now. By utilizing the money being held for maintenance in this work, we have got a running start that will enable us to make good progress through the winter."

Did you ever stop to think how much action goes on inside a solid tire under the stress of load and speed?

When we selected the right truck tires to offer you we knew that in designing the Firestone Heavy Duty Cushion Tire, Firestone engineers allowed for this "play" and "flow" of rubber.

They built a tire in which the free, easy rubber action is assisted and heat carefully radiated. And the result is a tire of greater traction, better cushion and longer mileage.

The traction groove at the center has powerful ground-gripping shoulders and frequent radiation pockets. After thousands of miles of service it will still be lively and resilient because constant heating has not hardened the mass of rubber. It will show less wear because it is tough and resilient.

We sell Firestone Tires because Firestone has consistently been a pioneer and leader in this field and results tell.

We would like to show you the full line of Truck tires and give you benefits of our specialized knowledge.

Attention of election officials is being called to the duties required of commissioners and clerks at the various precincts by the office of the secretary of state, with a view to expediting the November election results. The state's election laws contain explicit direction as to the duties to be performed by these officials and as to the promptness with which they are to be performed, but at the primary there were numerous complaints that these directions were disregarded.

One of the unique features of the West Virginia election law is the provision that the result of the count in each precinct must be posted at the front door of the polling place. The section of the code applying to this reads: "On completing the count and recording the same on tally sheets, the commissioners of election shall immediately make a memorandum of the total vote cast for each candidate, deliver a copy thereof to each member of board, and post a copy thereof on the front door of the polling room, and transmit a copy thereof to the clerk of the county court, who shall post the same in his office for public inspection."

The last portion of this has been quite generally observed, and at the most recent election, the primary, but few precincts failed to provide the County Courts with the memorandum. However, there were complaints from many precincts that copies were not posted in front of the polling places, and newspapermen seeking to collect returns from the precincts until after the closing of the polls, and the County Court of the night of the primary found numerous members of the boards who had no record of the vote.

Another section of the code providing that there shall be no delay in counting the ballots, reads: "When the polls are closed, the commissioners of election and poll clerks shall proceed to ascertain the result of the election in the manner hereinafter specified, and shall not adjourn nor delay until the votes are all counted, the result ascertained, the memorandum made, and copies thereof delivered and posted as hereinafter required."

The dual election boards in precincts that cast more than 100 votes in the previous general election tend to expedite the counting, and with a ballot shorter than any in recent years, while political observers predict the vote will not be heavy, the opinion has been expressed that the results should be known early.

BOSTON, Mass., Oct. 23.—J. G. Bradley of Dundon, W. Va., president of the West Virginia Coal Association, in a statement issued here today, charged that the railroads of the country are continuing to discriminate against the coal industry in face of the desperate need of cars in the bituminous coal fields and to the great damage of industries and domestic consumers needing coal.
